## ASSEMBLY REQUIRED

- All the process where bolting is mentioned please don't fully tighten there. After completing all the process there is one step given for tighten all the bolt and screw as it relates to each other.
- Fix the Pipe (F) into the Blower (A) – Bolt for these attach into Blower. You only require One Bolt; keep one bolt as spare.
- Assemble Blower (A) in the Fire Pot Frame (B) at given hole and Adjust the pipe according to the space given in the Fire Pot Frame as shown in photo.
- Attach the blower handle (H) to blower (A).
- Place the furnace pipe (F) into hole provided in the fire-pot frame (B) and bolt it. There may be slight adjustment requires for alignment. After this fully tighten the bolt and nut.
- Here, you will get the three option for different application;
  1. Blacksmithing
  2. Cooking Attachment
  3. BBQ Attachment

1. For, Blacksmithing you don't need to add any attachment simply put the coal in the space given into the fire pot and start your work.
  2. For Cooking Purpose Place, the Cooking Pot Stand. (PART-C)
  3. For BBQ Purpose Place the Skewers Stand(PART-E) and then if requires Use the Skewers. (PART-D)
- Now tighten all the bolt. Ensure the bolts aren't overturned or tightened more often than necessary.

**\*NOTE: Wear all safety instrument while assembling.**
