

## **WOOD FIRED KAZAN OVEN**

**WARNING:** This oven and all components are protected with a heat resistant paint coating that must be properly cured before use. To cure it place the fully assembled oven in an open, well ventilated place and build a small fire in the oven. It is recommended to cure the paint slowly by burning a moderate size fire during this process. Keep feeding that oven for up to 1 hours until the paint has fully cured; the paint should turn to dull black color and the oven will ready to use.
